# 1 Weakly Radon-Nikodým compact spaces

э

# Definition (E. Glasner and M. Megrelishvili)

A compact space K is said to be **weakly Radon-Nikodým** (WRN for short) if it is homeomorphic to a weak<sup>\*</sup>-compact subset of the dual of a Banach space not containing an isomorphic copy of  $\ell_1$ .

< ロ > < 同 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

# Definition (E. Glasner and M. Megrelishvili)

A compact space K is said to be **weakly Radon-Nikodým** (WRN for short) if it is homeomorphic to a weak<sup>\*</sup>-compact subset of the dual of a Banach space not containing an isomorphic copy of  $\ell_1$ .

# Definition

■ A set S ⊂ X is said to be **weakly precompact** if every sequence in S has a weakly Cauchy subsequence.

# Definition (E. Glasner and M. Megrelishvili)

A compact space K is said to be **weakly Radon-Nikodým** (WRN for short) if it is homeomorphic to a weak<sup>\*</sup>-compact subset of the dual of a Banach space not containing an isomorphic copy of  $\ell_1$ .

# Definition

- A set *S* ⊂ *X* is said to be **weakly precompact** if every sequence in *S* has a weakly Cauchy subsequence.
- X is weakly precompactly generated (WPG) if there exists a weakly precompact set  $S \subset X$  such that span S = X.

Weakly Radon-Nikodým compact spaces Stability under continuous images Existence of convergent sequences

... By analogy with the well-known class of weakly compactly generated Banach spaces, one may call a Banach space such as X above a weakly precompactly generated (or WPG) space. The above example shows that WPG spaces exhibit certain pathologies that do not occur for WCG spaces, and indeed do not occur for the interesting 'WKA spaces' of Talagrand. The present author would be interested to know whether WPG spaces have any of the good properties of these other classes, and whether there is a nice characterization of those compact spaces T for which C(T) is WPG. One obvious question is whether every such space T contains a nontrivial convergent sequence.

#### R. Haydon, 1980

Weakly Radon-Nikodým compact spaces Stability under continuous images Existence of convergent sequences

# Lemma

If K is WRN then C(K) is WPG.

<ロ> <部> <部> <き> <き> <き> <き</p>

If K is WRN then C(K) is WPG.

### Proof.

• WLOG,  $K \subset B_{X^*}$  with X not containing  $\ell_1$ .

æ

イロン イ団 とくほとくほとう

If K is WRN then C(K) is WPG.

# Proof.

- WLOG,  $K \subset B_{X^*}$  with X not containing  $\ell_1$ .
- Then,  $B_X$  is weakly precompact in X.

3

If K is WRN then C(K) is WPG.

# Proof.

- WLOG,  $K \subset B_{X^*}$  with X not containing  $\ell_1$ .
- Then,  $B_X$  is weakly precompact in X.
- Each  $x \in B_X$  defines a continuous function  $x : K \to \mathbb{R}$  such that  $x(x^*) = x^*(x)$  for every  $x^* \in K$ .

A compact space K is said to be **quasi RN (QRN)** if and only if there is a Reznichenko metric on K which fragments K.

• *d* is said to be Reznichenko if for every distinct points  $x, y \in K$  there are open sets  $x \in U$  and  $y \in V$  such that d(U, V) > 0.

### Theorem (A. D. Arvanitakis, 2002)

The continuous image of a RN compact space is QRN.

イロト イポト イヨト イヨト 三日

# Question (I. Namioka, 1987)

Is the continuous image of a RN compact space also RN?

### Definition

A compact space K is said to be **quasi RN (QRN)** if and only if there is a Reznichenko metric on K which fragments K.

• *d* is said to be Reznichenko if for every distinct points  $x, y \in K$  there are open sets  $x \in U$  and  $y \in V$  such that d(U, V) > 0.

### Theorem (A. D. Arvanitakis, 2002)

The continuous image of a RN compact space is QRN.

### Theorem (A. D. Arvanitakis, 2002)

Zero-dimensional QRN compacta are RN compacta.

Gonzalo Martínez Cervantes

A sequence (A<sup>0</sup><sub>n</sub>, A<sup>1</sup><sub>n</sub>)<sub>n∈N</sub> of disjoint pairs of subsets of a set S is said to be independent if for every natural number n and every ε : {1, 2, ..., n} → {0, 1} we have ∩<sup>n</sup><sub>k=1</sub> A<sup>ε(k)</sup><sub>k</sub> ≠ Ø.

イロト 不得 とくほ とくほ とうほう

イロト 不得 とくほ とくほ とうほう

### Definition

- A sequence (A<sup>0</sup><sub>n</sub>, A<sup>1</sup><sub>n</sub>)<sub>n∈ℕ</sub> of disjoint pairs of subsets of a set S is said to be independent if for every natural number n and every ε : {1, 2, ..., n} → {0, 1} we have ∩<sup>n</sup><sub>k=1</sub> A<sup>ε(k)</sup><sub>k</sub> ≠ Ø.
- A sequence of functions (f<sub>n</sub>)<sup>∞</sup><sub>n=1</sub> ⊂ ℝ<sup>S</sup> is said to be independent if there are p < q such that the sequence (A<sup>0</sup><sub>n</sub>, A<sup>1</sup><sub>n</sub>)<sub>n∈ℕ</sub> is independent, where A<sup>0</sup><sub>n</sub> = {s : f<sub>n</sub>(s) < p} and A<sup>1</sup><sub>n</sub> = {s : f<sub>n</sub>(s) > q} for every natural number n.

- A sequence (A<sup>0</sup><sub>n</sub>, A<sup>1</sup><sub>n</sub>)<sub>n∈ℕ</sub> of disjoint pairs of subsets of a set S is said to be independent if for every natural number n and every ε : {1, 2, ..., n} → {0, 1} we have ∩<sup>n</sup><sub>k=1</sub> A<sup>ε(k)</sup><sub>k</sub> ≠ Ø.
- A sequence of functions (f<sub>n</sub>)<sup>∞</sup><sub>n=1</sub> ⊂ ℝ<sup>S</sup> is said to be independent if there are p < q such that the sequence (A<sup>0</sup><sub>n</sub>, A<sup>1</sup><sub>n</sub>)<sub>n∈ℕ</sub> is independent, where A<sup>0</sup><sub>n</sub> = {s : f<sub>n</sub>(s) < p} and A<sup>1</sup><sub>n</sub> = {s : f<sub>n</sub>(s) > q} for every natural number n.

### Remark

A compact space K is WRN if and only if there exists a set  $\Gamma$  such that  $K \hookrightarrow [0, 1]^{\Gamma}$  and for every p < q, the family of pairs  $A^{0}_{\alpha} = \{x \in K : x_{\alpha} < p\}, A^{1}_{\alpha} = \{x \in K : x_{\alpha} > q\}$  with  $\alpha \in \Gamma$  does not contain independent sequences.

(a)

A compact space  $K \hookrightarrow [0,1]^{\Gamma}$  is **quasi-WRN** (QWRN for short) if for every  $\varepsilon > 0$  there exists a decomposition  $\Gamma = \bigcup_{n \in \mathbb{N}} \Gamma_n^{\varepsilon}$  such that for every p < q with  $q - p > \varepsilon$ , the family of pairs  $A_{\alpha}^0 = \{x \in K : x_{\alpha} < p\}, A_{\alpha}^1 = \{x \in K : x_{\alpha} > q\}$  with  $\alpha \in \Gamma_n^{\varepsilon}$  does not contain independent sequences.

イロト イポト イヨト イヨト 二日

A compact space  $K \hookrightarrow [0,1]^{\Gamma}$  is **quasi-WRN** (QWRN for short) if for every  $\varepsilon > 0$  there exists a decomposition  $\Gamma = \bigcup_{n \in \mathbb{N}} \Gamma_n^{\varepsilon}$  such that for every p < q with  $q - p > \varepsilon$ , the family of pairs  $A_{\alpha}^0 = \{x \in K : x_{\alpha} < p\}, A_{\alpha}^1 = \{x \in K : x_{\alpha} > q\}$  with  $\alpha \in \Gamma_n^{\varepsilon}$  does not contain independent sequences.

#### Lemma

Every WRN compact space is QWRN.

A compact space  $K \hookrightarrow [0,1]^{\Gamma}$  is **quasi-WRN** (QWRN for short) if for every  $\varepsilon > 0$  there exists a decomposition  $\Gamma = \bigcup_{n \in \mathbb{N}} \Gamma_n^{\varepsilon}$  such that for every p < q with  $q - p > \varepsilon$ , the family of pairs  $A_{\alpha}^0 = \{x \in K : x_{\alpha} < p\}, A_{\alpha}^1 = \{x \in K : x_{\alpha} > q\}$  with  $\alpha \in \Gamma_n^{\varepsilon}$  does not contain independent sequences.

#### Lemma

Every WRN compact space is QWRN.

#### Theorem

The definition of being QWRN does not depend on the set  $\Gamma$ .

イロト イポト イヨト イヨト 三日

There exists a WRN compact space which is not sequentially compact.

### Proof.

- Let R be a maximal family of subsets of N with respect to the condition that for R, S ∈ R at least one of the sets R ∩ S,
  R ∩ S<sup>c</sup> or R<sup>c</sup> ∩ S is finite.
- The set  $C = \{1_R : R \in \mathcal{R}\}$  of  $\ell_{\infty}$  is weakly precompact.

• Take 
$$X = \overline{\text{span}} \ C \subset \ell_{\infty}$$
.

There exists a WRN compact space which is not sequentially compact.

### Definition

• Set an ordinal  $\epsilon > 0$ . An inverse system is a family  $\langle f_{\alpha,\beta}, K_{\alpha} : \alpha < \beta < \epsilon \rangle$  of compact spaces  $K_{\alpha}$  and continuous functions  $f_{\alpha,\beta} : K_{\beta} \to K_{\alpha}$  such that  $f_{\alpha,\gamma} \circ f_{\gamma,\beta} = f_{\alpha,\beta}$  for any  $\alpha < \gamma < \beta$ .
